TECNIUM NEWS

JANUARY-FEBRUARY 2013

## TECNIUM Pumps - Uranium Mining

**Uranium mining** is relatively young and the producing countries considered strategic.

Their extraction is mainly focused in Canada, Kazakhstan, Australia and South Africa.

**Tecnum pumps** are used in the process of obtaining uranium, mines in Asia and Africa under environmental and working conditions extremely aggressive. It is possible, for example, find process horizontal pumps or vertical without mechanical seal, working outdoors **at temperatures of -30 ° C**.

The trajectory of Tecnum in mining has led us to work jointly with the final customers and major international engineering responsible for mining projects

## TECNIUM Covers - Modular Covers

**WIDE RANGE OF PRODUCTS**, up to 30m diameter without central support, used to:

- Thickeners, slurry tanks, Archimedean screws, biological ponds, decanters, tanks, etc.
- Making of special designs adapted to the characteristics and requirements of each individual application.

**SIGNIFICANT ADVANTAGES** compared to other kinds of closures:

- ⇒ **Corrosion-resistant** towards the more common gases in W.W.T.P., applications such as hydrogen sulphide and mercaptans.
- ⇒ **Easy to be dismantled**
- ⇒ **No maintenance requirements**
